

Healthcare providers wrote **480 million** opioid prescriptions in 2014

70% remain unused and available for abuse

3 out of 4 People with a heroin dependence began with prescription opioids

As of 2014, there were more than 1,700 published reports of the occurrence of pharmaceuticals in sewage, surface waters, ground waters and elsewhere.

The disposal of unused, unwanted or expired pharmaceuticals contributes to the occurrence of active pharmaceutical ingredients in aquatic environments, wastewater biosolids and treated drinking water.

A SERVICE-DISABLED VETERAN-OWNED SMALL BUSINESS

While take-back programs help prevent abuse, they are costly and not as environmentally responsible at Deterra® due to incineration. The Deterra® pouch is Omnidegradable® and will break down over time in landfills.

Most federal, state and local authorities are now recommending (and many requiring) that pharmaceuticals not be disposed in the toilet or sink.

Powered by patented

MAT₁₂TM Molecular Adsorption Technology

Environmental Responsibility

98% success in deactivating drugs

Renders drugs safe for landfills

Reduces watershed contamination

Social Responsibility

Cost-effective abuse deterrent technology

Reduces misuse-related medical emergencies

Convenience

Works for pills, liquids and patches

Simple 3-step process

For home, clinical and public settings
